

**Job Title: JUNIOR SOFTWARE ENGINEER**

**Location: GDANSK/POLAND**

**Job Description:**

We are currently looking for a Junior Software Engineer to participate in the development of an online database platform. We are working on two ongoing projects of which one is related to the automotive industry. Both projects have reached a maturity level which allows us to introduce it to the customers but some important functionality is still to be developed. This job is based in Gdansk/Poland but may require occasional trips to the UK. We are also looking for more senior Software Developer to join the projects so if you feel confident about your skills you may consider applying for please apply for a Python/Django Developer role instead.

**Typical Tasks:**

- Developing database software
- Creating and running unit and functional tests
- Improving stability of existing products
- Upgrading and enhancing existing software projects
- Adding new functionality
- Creating product documentation
- Maintaining the software and resolving issues raised by users

**Candidates Profile:**

- University Studies in Informatics, Telecommunication or Electronics (students and graduates will be considered)
- some experience in Python programming language
- some knowledge of Django framework
- some knowledge of database programming (PostgreSQL and MySQL)
- strong interest in self-learning and motivation is essential
- commitment to work and flexibility is desired
- communicative English
